	Height within the "90" doorframe	2000 ± 2 mm		
	Height within the wall opening	2090 ± 5 mm		

DOOR CONSTRUCTION

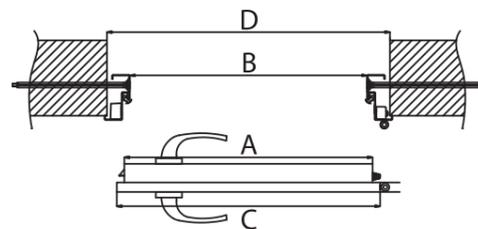

Full or glazed GRANDE 68 door are made in a pad version with 68 1 mm thickness. The external surface has been made out of metal sheets pressed into a panel pattern, of the highest quality, imported, fire zinc-plated sheets, coated with a wood-like PVC foil. The surface is additionally protected with a protective foil, which has to be removed immediately after door installation. Expanded Styrofoam comprises the thermoinsulating filling. Within the door, a wooden frame has been installed, running around the door, and reinforcements at the spots of hinges and locks installation. As a standard, the doors are equipped with two 3-bolt locks, internal, using a patented insert. The door is equipped with anti-breaking bolts. It is possible to shorten the door width in the range from 4,5 to 7 cm. The doorframe is made of steel shapes, zinc-plated and coated with wood-like laminate. It is possible to purchase ENERGO doorframe at a surcharge. High quality, pressed sealing in the door and the doorframe provides tightness and quiet door operation. The doors are designed for installation in domestic premises, public utility premises and industrial premises as external or internal doors. The doors are resistant to deformations, weather conditions, they have a reinforced, steel construction and increased resistance to moisture.

GLAZING

Decorative glazing with stainless steel frames INOX, brushed structure. They are characterized by lack of joints between the elements in the corners, as well as lack of installation caps from the inside. Flat glass, tempered, 68 mm thickness is present in the MIRROR, MILKY versions.

STAINLESS STEEL THRESHOLD AS A PART OF THE KIT

Frame height 2025 mm ± 2 mm				
Height within the doorframe 2000 ± 2 mm				
Height within the wall opening 2080 ± 5 mm				

DOOR CONSTRUCTION

Full or glazed ECO VENUS doors are made in a pad version with 41 ± 1 mm thickness. The external surface has been made out of metal sheets pressed into a panel pattern, of the highest quality, imported, fire zinc-plated sheets, coated with a wood-like PVC foil in the following colours: golden oak, walnut, mahogany. The surface is additionally protected with a protective foil, which has to be removed immediately after door installation. Styrofoam EPS 70 comprises the thermoinsulating filling. Within the door, a wooden frame has been installed, running around the door, and reinforcements at the spots of hinges and locks installation. As a standard, the doors are equipped with two 3-bolt locks, internal, using a patented insert. The door is equipped with anti-breaking bolts. It is possible to shorten the door width up to 7 cm. The doorframe is made of steel shapes, zinc-plated and coated with PVC foil in the colour of the door, folded version. High quality, pressed sealing in the door and the doorframe provides tightness and quiet door operation. The doors are designed for installation in domestic premises, public utility premises and industrial premises as external or internal doors.

Height within the wall opening 2074 ± 5 mm				

DOOR CONSTRUCTION

Technical doors ECO-TECHNIC are used mainly in utility premises, such as pantries, cellars and basements. They have the standard thickness encountered and used in the aforementioned uses, 41 mm, which makes installation and fitting easier. They are equipped with one inserted lock and three screwed-in hinges. They are made of zinc-plated metal sheet, or in the colour of the doorframe, primed.

The doorframe is made of steel metal sheets, welded, in the colour of the door, primed. It is possible to shorten the width of the door by up to 7 cm. It is possible to order the door in sizes 60 and 70.
